MAINTENANCE TIPS

Summer Heat & Your AC - During high heat, AC units may struggle to keep up and can freeze or shut down. They're designed to cool about 20°F below the outside temp—so if it's 95°F out, your home might not hit 72°F even if the unit runs nonstop. Dirty coils, low refrigerant, or poor airflow make cooling harder.

To prevent issues, keep the outside condenser clear of grass and weeds. Residents can rinse it down with a hose to help the unit work more efficiently. Be sure to also change out your inside air filters monthly. Please contact your community office to pick one up.
